

GITHUB HOT REPOS · MAY 21, 2026

Hot GitHub repos of the week.

Report by The Next New Thing.

PERSONAL AI · OPEN SOURCE

An AI assistant on your own computer that already knows 118 of the apps you live in.

WHY IT'S TRENDING

Pitched as "Your Personal AI super intelligence. Private, Simple and extremely powerful." It's one of the first open-source agent frameworks that ships with 118+ third-party integrations pre-wired and a UI-first design — so non-engineers can actually use it.

View repo →

INTEGRATIONS
118+

HIGHLIGHTS

- 118+ integrations
Third-party apps with auto-fetch, included out of the box — Slack, Gmail, calendar, and more.
- Memory Tree + Obsidian Wiki
Remembers what you've told it, stores notes in a format you already own.
- TokenJuice
Smart token compression so long conversations stay cheap.
- Batteries included
Voice, web search, code tools, and messaging channels all built in.
- Private by design
Runs locally on macOS, Linux, or Windows — no subscription needed.

AI CODING · KNOWLEDGE GRAPH

A map of your codebase so your AI assistant stops grepping the same files 50 times.

WHY IT'S TRENDING

A 100% local, SQLite-backed knowledge graph that plugs into Claude Code, Codex, Cursor, and OpenCode. The pitch — "~35% cheaper · ~70% fewer tool calls · 100% local" — is landing because anyone paying for Claude or Cursor by the token feels this bill every month.

View repo →

STARS	LANGUAGE	CHEAPER
~13k	TypeScript	~35%

HIGHLIGHTS

- Smart context building
Your agent queries a pre-indexed graph instead of scanning files one at a time.
- 19+ languages
Works across most stacks you'd actually ship.
- Framework-aware routes
Understands Next.js, Express, and FastAPI patterns out of the box.
- Always fresh
Keeps the index up to date automatically as you code.
- 100% local
No cloud, no upload of your source — runs entirely on your machine.

ACADEMIC RESEARCH

A toolkit that handles the grunt work of academic research — hunting references, formatting citations, checking your data.

WHY IT'S TRENDING

Positioned as "a comprehensive suite of Claude Code skills for academic research, covering the full pipeline from research to publication." For grad students and indie researchers using Claude as a co-author, this is the first end-to-end toolkit that takes the workflow seriously instead of being one prompt.

[View repo →](#)

STARS

LANGUAGE
Python

PIPELINE
10 stages

HIGHLIGHTS

- Deep research (7 modes)
Different research workflows depending on what kind of project you're running.
- Academic paper (10 modes)
Drafts and structures the paper itself, not just the research feeding it.
- Paper reviewer (6 modes)
Turns Claude into a peer reviewer that surfaces gaps before you submit.
- 10-stage orchestrator
Chains the whole pipeline from idea to publishable draft in one flow.
- Reproducibility lockfile
Keeps your data and code reproducible by other researchers.

SPONSOR · ZAPIER MCP

One MCP URL, 8,000+ tools your agent can call — Gmail, Google Calendar, Asana, Notion, and thousands more. No code. No glue.

WHY IT'S TRENDING

I've used Zapier across multiple businesses for over 10 years. They've been doing automation reliably long before this moment — and the MCP service brings that same reliability to any AI agent you're building with.

Try Zapier MCP →

TOOLS

8,000+

SETUP

2 min

PLAN

Free start

HIGHLIGHTS

• Zapier just released MCP

Exposes 8,000+ tools as MCP resources any agent can call.

• Works with every agent

Claude Code, OpenCode, Cursor — anything that speaks MCP.

• Setup in two minutes

Enable the tools you want in Zapier, grab the MCP endpoint, paste it into your agent.

• Zero code, zero glue

Zapier handles auth, rate limits, and reliability for you.

• Battle-tested infra

Built on 10+ years of automation pipes, with an MCP face.

ON-DEVICE TTS

Text-to-speech fast enough to read an entire webpage out loud in under a second — and it runs on your laptop.

WHY IT'S TRENDING

Supertonic dropped a 99-million-parameter open-weight voice model that works in 31 languages, with SDKs for every major platform. The combination of "fast enough for real-time" + "runs offline" + "open weights" is unusual — most TTS this good is a paid API.

View repo →

STARS	LANGUAGE	LANGUAGES
~9.1k	Multi-SDK	31

HIGHLIGHTS

- **Blazingly fast**
Low-latency, real-time synthesis on desktop, browser, mobile, and edge.
- **31 languages**
Multilingual out of the box, no extra models to ship.
- **99M open-weight model**
Small enough to ship inside an app, not call a server for.
- **Edge-device ready**
Runs on phones and tiny machines, not just servers.
- **44.1kHz audio**
Broadcast-quality output — clean enough to ship to listeners.

CODING AGENT MEMORY

Every new chat with your AI is like meeting a brilliant employee with total amnesia. This gives them a memory.

WHY IT'S TRENDING

Memory for coding agents has become the obsession of late spring 2026, and AgentMemory is the most fully featured of the open-source options. The pitch line — "Your coding agent remembers everything. No more re-explaining." — is doing the work.

AUTO HOOKS
12

HIGHLIGHTS

- Automatic capture
12 hooks pick up what you said and did, without you tagging anything.
- Hybrid semantic search
BM25 + vector + graph — finds the right memory three ways.
- Auto-forgetting
Old or wrong stuff decays so your context stays clean.
- Privacy first
Runs locally — you own the memory, not a vendor.
- One brain, many agents
Claude, Cursor, Codex, and Gemini all share the same memory.

ANTI-BOT BROWSER

A browser that looks like a normal human visitor — even to the systems built to catch bots.

WHY IT'S TRENDING

Bot detection is getting brutal — Cloudflare, FingerprintJS, BrowserScan, reCAPTCHA. CloakBrowser is a custom Chromium binary with 58 C++ source-level patches that fix the giveaway signals at the source. For anyone building agents that need to actually use the web, this is the new baseline.

View repo →

STARS
~18.1k

LANGUAGE
Python + TS

PATCHES
58

HIGHLIGHTS

- 58 source-level patches
Fixes canvas, WebGL, audio, fonts, GPU, and WebRTC fingerprints in the binary itself.
- Drop-in Playwright replacement
Same API as the tool you're already using — swap and go.
- `humanize=True` flag
Adds human-like mouse movement and typing timing automatically.
- 0.9 reCAPTCHA v3 score
Passes as a real person on the score detectors usually break agents.
- Free and open source
No per-scrape licensing — replaces \$300–\$500/mo anti-detect SaaS.

WIFI SENSING

Your WiFi router can tell who's in a room, whether they're breathing, even their heart rate — no cameras, no wearables.

WHY IT'S TRENDING

WiFi sensing has been a research curiosity for years; RuView is one of the first practical, deployable stacks. The combination of presence detection, vital signs, and sleep monitoring without a single camera is genuinely novel — and a little uncomfortable, which is part of the conversation.

View repo →

STARS
~62.9k

LANGUAGE
Rust + JS

SENSORS
None

HIGHLIGHTS

- Presence and occupancy
Knows who's in each room — through walls, with no line of sight.
- Vital signs
Breathing rate and heart rate measured by radio disturbance alone.
- Sleep quality monitoring
Without putting anything on your body or pointing a camera at the bed.
- 3D point cloud fusion
Builds a spatial map of bodies in space from radio alone.
- Edge intelligence
Runs on local hardware — no cloud roundtrip, no data leaving the house.

JAVASCRIPT RUNTIME

A faster replacement for Node.js that bundles in every tool you'd normally install separately.

WHY IT'S TRENDING

Bun isn't new, but it's been on a tear with built-in clients for SQLite, Postgres, Redis, and S3 — meaning a Bun-only app can replace what used to take a half-dozen npm packages. For entrepreneurs shipping fast, that's fewer dependencies, fewer bugs, less maintenance.

View repo →

STARS
~92.2k

LANGUAGE
Zig + Rust

SURFACE
All-in-one

HIGHLIGHTS

- Drop-in for Node.js
Most of your existing code just runs — no rewrite required.
- All-in-one toolkit
Runtime, bundler, test runner, and package manager in one binary.
- `bun install`
Package installs in a fraction of npm's time.
- Built-in databases
SQLite, Postgres, Redis, and S3 clients included — no extra packages.
- TypeScript + JSX out of the box
No transpiler setup, no config file gauntlet.

AGENT PATTERNS

A free playbook for building AI agents that actually work in production — the hard-won lessons that usually take a year of mistakes.

WHY IT'S TRENDING

Dex at HumanLayer wrote this as a riff on the famous "12-factor app" rules from the early web era — but for LLM-powered software. Founders building agent products are passing it around like a manifesto because it names patterns everyone is rediscovering independently.

LANGUAGE
TypeScript

FACTORS
12

HIGHLIGHTS

- Own your prompts
Don't hide them behind a framework you can't see into.
- Own your context window
Manage what the model sees, deliberately — not as an accident.
- Tools are structured outputs
Stop overcomplicating — a tool call is just a typed object.
- Bring humans in on purpose
Contact humans with tool calls, the same way you'd call any other API.
- Small, focused agents
Composition beats one giant brain trying to do everything.

Principles that actually work

paddo.dev

VIBE CODING COURSE

A free beginner course that teaches you to build real apps just by describing what you want.

WHY IT'S TRENDING

From Datawhale — the Chinese open-learning collective behind several huge free ML courses — this is the first big "vibe coding" curriculum for true beginners. The framing (if you can talk, you can build apps) is going viral because it matches how people are actually using Cursor and Claude.

[View repo →](#)

STARS	LANGUAGE	AUDIENCE
~13.8k	JavaScript	Beginners

HIGHLIGHTS

- **Beginner-friendly map**
Clear path from zero to shipping — no prerequisites assumed.
- **Step-by-step visual tutorials**
Short, visual lessons — not 90-minute lecture videos.
- **Immersive simulated coding**
Practice in-browser without setting up a local environment.
- **Visible AI principles**
Shows you what the AI is actually doing, not just the magic.
- **Learn RAG like a game**
Gamified path through retrieval-augmented generation.
