

GITHUB HOT REPOS · MAY 28, 2026

Hot GitHub repos of the week.

Report by The Next New Thing.

CODEBASE INTELLIGENCE

You join a new team, 200k lines of code — turn it into a clickable map instead of reading it blind.

WHY IT'S TRENDING

A Claude Code plugin that scans your project with multiple AI agents, builds a knowledge graph of every file, function, and class, then opens an interactive dashboard you can search and explore. The tagline "graphs that teach > graphs that impress" is hitting people sick of pretty-but-useless visualizations.

PLATFORMS
10+

HIGHLIGHTS

- One-line install
/plugin install understand-anything inside Claude Code, plus a one-line installer script for Codex, Cursor, Gemini CLI, and more.
- Interactive dashboard
Every file, function, and class is a clickable node with a plain-English summary.
- Guided tours
Auto-generated walkthroughs in dependency order so you learn the codebase the right way.
- Diff impact analysis
See which parts your change affects before you commit.

CLAUDE CODE · INDEXING

Claude Code wastes time hunting through your codebase — this gives it a map first, so it makes **94% fewer tool calls**.

WHY IT'S TRENDING

Built specifically for **Claude Code's Explore agents**. The benchmark numbers — tested across VS Code, Excalidraw, Swift Compiler, and Claude Code itself — are concrete enough to share. 100% local, no API keys, no data leaves your machine.

SPEED

77% faster

HIGHLIGHTS

- One-line install

npx @colbymchenry/codegraph runs an interactive installer that wires up Claude Code automatically.
- 19+ languages

TypeScript, Python, Go, Rust, Java, C#, Swift, Kotlin, Dart, Svelte, even Delphi.
- Always fresh

Native OS file events with debounced auto-sync; the graph updates as you code.
- Eight MCP tools

Search symbols, find callers, trace impact, build context — all callable from

EDUCATION · FROM SCRATCH

A free, 230-lesson course from linear algebra to autonomous agent swarms — every lesson ships a tool you keep.

WHY IT'S TRENDING

Most AI courses give you one slice. This one walks **all 20 phases** — math, ML, deep learning, NLP, speech, transformers, LLMs, agents, multi-agent swarms — and by the end you have a folder of prompts, skills, agents, and MCP servers you actually built.

View repo →

STARS
124

LANGUAGE
Python

LESSONS
230+

HIGHLIGHTS

- 230+ hands-on lessons
Across 20 phases — "build it from scratch first, then use frameworks."
- Free and MIT
Clone the repo and start running code. No paywall, no signup.
- Four languages
Python, TypeScript, Rust, Julia — most lessons are Python.
- Outputs you keep
Every lesson dumps a reusable prompt, SKILL.md, agent definition, or MCP server.
- Five capstones

SPONSOR · ZAPIER MCP

One MCP URL, 8,000+ tools your agent can call — Gmail, Google Calendar, Asana, Notion, and thousands more. No code. No glue.

WHY IT'S TRENDING

I've used **Zapier** across multiple businesses for over 10 years. They've been doing automation reliably long before this moment — and the **MCP** service brings that same reliability to any AI agent you're building with.

Try Zapier MCP →

TOOLS

8,000+

SETUP

2 min

PLAN

Free start

HIGHLIGHTS

• Zapier just released MCP

Exposes 8,000+ tools as MCP resources any agent can call.

• Works with every agent

Claude Code, OpenCode, Cursor — anything that speaks MCP.

• Setup in two minutes

Enable the tools you want in Zapier, grab the MCP endpoint, paste it into your agent.

• Zero code, zero glue

Zapier handles auth, rate limits, and reliability for you.

• Battle-tested infra

CREATOR TOOLKIT

Download video and audio from YouTube and 1,000+ other sites — no API, no signup, no monthly fee.

WHY IT'S TRENDING

A command-line tool creators have leaned on for years to grab clips from YouTube, X, Twitch, Reddit, and a long list of other sites. Dominated **GitHub trending** in early 2026 as the YouTube anti-scraping arms race kept it in the headlines and AI workflows (transcribe → summarize → repost) made fast bulk downloads matter again.

[View repo →](#)

STARS
~166k

LANGUAGE
Python

LICENSE
Unlicense

HIGHLIGHTS

- **One command, any site**
`yt-dlp <url>` grabs the best available quality from YouTube, X, Twitch, Reddit, and many more.
- **Audio extraction**
Pull just the audio for transcription pipelines.
- **Format selection**
Choose resolution, codec, and bitrate right from the command line.
- **Playlist + channel batch downloads**
Archive an entire channel or playlist in one run.
- **Subtitles + thumbnails**
Pull captions and cover art alongside the video.

NOTION ALTERNATIVE

An AI-powered Notion alternative **you can self-host** — your docs and your team's data stay on your machine.

WHY IT'S TRENDING

71k stars and growing. A workspace that does docs, wikis, and project boards — the same surface area as **Notion** — but the data lives on your computer or your server instead of theirs. Founders avoiding subscription creep and teams avoiding cloud-data risk have both picked it up.

[View repo →](#)

STARS ~71k	LANGUAGE Dart	LICENSE AGPL-3.0
---------------	------------------	---------------------

HIGHLIGHTS

- Docs, wikis, and project boards**
Same surface area as Notion — pages, databases, kanban, calendars.
- AI built in**
Chat, summarize, and draft inside your workspace.
- Self-hosted by default**
Your data lives on your machine or your server.
- Open source under AGPL**
Fork it, modify it, never pay a per-seat fee.
- Cross-platform**
macOS, Windows, Linux, iOS, and Android — built on Flutter.

CAL.COM COMMUNITY FORK

Cal.com without the enterprise paywall — a 100% MIT-licensed scheduling platform you self-host.

WHY IT'S TRENDING

Cal.com runs an "Open Core" model where teams, SSO, and workflows live behind a license key. **cal.diy** is a community fork that strips that gate out entirely and ships everything under MIT. For founders who want a scheduling tool they fully own, with no per-seat fees, this is the cleanest answer.

[View repo →](#)

STARS	LANGUAGE	LICENSE
Community fork	TypeScript	MIT

HIGHLIGHTS

- **Strips out the enterprise paywall**
Teams, organizations, SSO, and workflows all included by default.
- **No license key required**
Works out of the box — no Cal.com account needed.
- **Self-host anywhere**
Docker compose, Railway, Vercel, Northflank, and Render all supported.
- **100% MIT**
Fork freely — no "Open Core" gotchas.
- **Same stack as Cal.com**
Next.js, tRPC, Prisma, PostgreSQL — familiar to anyone who has touched the parent project.

PLUGINS · KNOWLEDGE WORK

Anthropic open-sourced 11 ready-made plugins that turn Claude into a specialist for whatever job you do.

WHY IT'S TRENDING

Each plugin bundles the skills, slash commands, and tool connections an entire role needs. Built for **Claude Cowork**, also works in Claude Code. Then your team customizes them with your own tools and terminology.

View repo →

STARS
~16.2k

LANGUAGE
Python

PLUGINS
11

HIGHLIGHTS

- 11 plugins out of the box
Sales, product-management, marketing, legal, finance, data, customer-support, enterprise-search, bio-research, plus more.
- Connectors per role
Sales gets HubSpot, Close, Clay, ZoomInfo. Legal gets Box, Egnyte. Data gets Snowflake, Databricks, BigQuery.
- One-line install
`claude plugin install sales@knowledge-work-plugins` inside Claude Code.
- All markdown and JSON
No code, no infrastructure, no build steps. Fork it and customize for your company.

SHORT-FORM VIDEO

Give it a topic, get back a finished short video — script, footage, voiceover, subtitles, music — in one click.

WHY IT'S TRENDING

Already a giant repo, climbing again because the short-form video creator economy keeps growing. It's the open-source version of all those "AI shorts" SaaS tools, and you can run it locally or in Docker. Trending on Trendshift.

View repo →

STARS
~50k

LANGUAGE
Python

FORMATS
9:16 + 16:9

HIGHLIGHTS

- **One-click generation**
Provide a topic, get a finished HD video out. Vertical 9:16 or horizontal 16:9.
- **Bring your own LLM**
OpenAI, Moonshot, Azure, Gemini, Ollama, DeepSeek, Qwen, ModelScope, and more.
- **Voice synthesis built in**
Multiple voices including newer Azure voices; preview before generating.
- **Royalty-free stock footage**
Sources HD clips matched to your script, or use your own local files.
- **Docker one-line setup**

PRESENTATIONS · OPEN SOURCE

An open-source **Gamma** alternative you can self-host — slides from a prompt, export to PowerPoint or PDF.

WHY IT'S TRENDING

The pitch is "no SaaS lock-in, no forced subscriptions, full control." Works with **OpenAI**, **Anthropic**, **Gemini**, or your own local **Ollama** model. Comes as Docker or a native desktop app for Mac, Windows, and Linux.

[View repo →](#)

STARS
~4.8k

LANGUAGE
TypeScript

LICENSE
Apache 2.0

HIGHLIGHTS

- Self-host via Docker
`docker run -p 5000:80 ghcr.io/presenton/presenton:latest` and you're up.
- Desktop app option
Native installers for Mac, Windows, and Linux on [presenton.ai](#).
- Bring your own key
OpenAI, Gemini, Anthropic, or any OpenAI-compatible endpoint.
- Built-in MCP server
Generate presentations over Model Context Protocol from any compatible agent.

All 21 repos, with sources, quotes, and the cross-cutting themes.

WRITING · ANTI-SLOP

A skill file that catches every AI tell in your writing — so your prose stops sounding like ChatGPT wrote it.

WHY IT'S TRENDING

Writers and marketers have caught on that AI-detectable prose is killing engagement. This is a 5-file skill any Claude project, Claude Code session, or system prompt can load to clean up its own writing. 3k stars after the author Hardik Pandya tweeted it.

View repo →

STARS
~3k

TYPE
Skill

LICENSE
MIT

HIGHLIGHTS

- **Drop-in skill file**
Load SKILL.md into Claude Code, a Claude Project, your API system prompt, or any LLM.
- **Catches banned phrases**
Throat-clearing openers, emphasis crutches, business jargon, all adverbs, vague declaratives.
- **Catches structural clichés**
Binary contrasts, negative listings, dramatic fragmentation, narrator-from-a-distance voice.
- **Sentence-level rules**
No em dashes, no Wh- starters, no staccato fragments, active voice

WIFI SENSING · EDGE

A \$9 chip plus your WiFi router can see through walls — detect people, breathing, and heart rate. No cameras.

WHY IT'S TRENDING

From **ruvnet** (the Claude Flow / Ruflo guy). A full WiFi-sensing platform built on ESP32 microcontrollers. Still beta, but the demo is wild — a pretrained model on Hugging Face that runs in microseconds on a Raspberry Pi and reports 100% presence accuracy on validation.

View repo →

HARDWARE \$9 ESP32	LANGUAGE Rust	COGS 105
--	-------------------------------------	--------------------------------

HIGHLIGHTS

- Hardware: \$9 ESP32-S3

Or \$140 for the full system with a Cognitum Seed for memory and AI integration.
- What it senses

Presence through walls, breathing rate, heart rate, falls, sleep stages.
- Docker demo

`docker run -p 3000:3000 ruvnet/wifi-densepose` runs with simulated data, no hardware needed.
- Pretrained on Hugging Face

8 KB quantized model runs on Raspberry Pi in microseconds.

CYBERSECURITY · SKILLS

754 structured security skills your AI agent can plug into — so it knows which forensics tool to run instead of guessing.

WHY IT'S TRENDING

Community project (despite the name, **not affiliated with Anthropic**). The largest open-source security skills library. Every skill maps to five frameworks at once: MITRE ATT&CK, NIST CSF 2.0, MITRE ATLAS, MITRE D3FEND, and NIST AI RMF.

SKILLS
754

DOMAINS
26

PLATFORMS
26+

HIGHLIGHTS

- One-line install

```
npm install mukul975/Anthropic-Cybersecurity-Skills
```

- 26 security domains

Cloud Security, Threat Hunting, Threat Intel, Web App Sec, Malware Analysis, Digital Forensics, and 20 more.

- Works everywhere

Claude Code, GitHub Copilot, Codex CLI, Cursor, Gemini CLI, Windsurf — 26+ platforms.

- Five frameworks per skill

ATT&CK + NIST CSF + ATLAS + D3FEND + AI RMF on every single skill.

- Real workflows

Each SKILL.md has When to Use, Prerequisites, Workflow, Verification — not summaries.

[View repo →](#)

CURSOR · PLUGINS

Cursor just launched its own plugin marketplace — official plugins for parallel cloud agents, PR review canvases, and more.

WHY IT'S TRENDING

Cursor entered the same plugin race Anthropic just expanded. This is the official spec plus **9 first-party plugins**. The "Orchestrate" plugin — fan large tasks out across parallel Cursor cloud agents with planners, workers, and verifiers — is the headline feature.

View repo →

STARS
413

LANGUAGE
TypeScript

PLUGINS
9

HIGHLIGHTS

- Orchestrate**
Fan large tasks out across parallel Cursor cloud agents with planner/worker/verifier structure.
- PR Review Canvas**
Turns PR diffs into interactive canvases that group changes by importance.
- Docs Canvas**
Renders architecture notes, API refs, and runbooks as navigable canvases with TOC.
- Cursor SDK**
Build apps and CI pipelines on top of the Cursor TypeScript SDK.
