

GITHUB HOT REPOS · JUNE 4, 2026

Hot GitHub repos of the week.

Report by The Next New Thing.

FACELESS VIDEO AUTOMATION

Type one sentence, get a finished TikTok-ready video — script, footage, voiceover, subtitles.

WHY IT'S TRENDING

A fresh release shipped May 30 with a cleaner install and a big rendering-engine upgrade. It's the most complete free answer to paid faceless-video tools like Pictory (\$25–35/mo) — and at ~79,000 stars it keeps climbing.

Python

AI MODELS
15+

HIGHLIGHTS

- One-click videos
Topic in, finished HD short out: script, stock footage, voiceover, subtitles, music.
- Batch mode
Generates several versions at once so you pick the best one.
- Free voiceovers
The default text-to-speech needs no API key and costs nothing.
- 15+ AI brains
Works with OpenAI, Gemini, DeepSeek — or a free local model via Ollama.
- Try it without installing
A Google Colab notebook and a free hosted version (RecCloud) are linked in the README.

TOKEN COMPRESSION

Your AI agents are burning money reading junk — this **shrinks everything before it's sent.**

WHY IT'S TRENDING

152 releases and counting from solo builder Tejas Chopra — the latest shipped **June 1**. The README claims the community has saved **60 billion+ tokens**, with a live leaderboard. As AI tools start metering tokens, "pay less for the same answers" is suddenly everyone's problem.

View repo →

STARS
~4.8k

LANGUAGE
Python

CLAIMED SAVINGS
60–95%

HIGHLIGHTS

- One command to hook in `headroom wrap claude` (or codex, cursor, aider, copilot) instruments your coding agent.
- Nothing gets lost
Compression is reversible — originals are kept and the AI can pull full text back when it needs it.
- Six specialized compressors
Different engines for code, JSON data, prose, and images.
- Receipts in the README
Their benchmark: a debugging session went from 65,694 tokens to 5,118 — accuracy unchanged.
- Shared agent memory
Claude, Codex, and Gemini can share one deduplicated memory store.

DOCUMENT CONVERSION

Microsoft's free universal adapter for AI — any file in, clean AI-ready text out.

WHY IT'S TRENDING

A May 26 update added an OCR plugin that reads text out of images buried inside documents, plus an Azure integration for video and structured data extraction. At ~143,000 stars it's one of the fastest-growing repos GitHub has ever had — and 2,700+ projects already build on it.

View repo →

STARS
~143k

LANGUAGE
Python

USED BY
2.7k+

HIGHLIGHTS

- Converts nearly everything
PDF, Word, PowerPoint, Excel, images, audio, HTML, ZIP archives — even YouTube URLs.
- One-line command
`markitdown file.pdf > document.md` — that's the whole tutorial.
- Reads pictures inside documents
The new OCR plugin pulls text from images embedded in PDFs and slides.
- Describes images with AI
Hook up an AI model and it writes descriptions of photos and charts.
- Built by Microsoft's agent team
From the AutoGen group — designed for AI pipelines from day one.

SPONSOR · ZAPIER MCP

One MCP URL, 8,000+ tools your agent can call — Gmail, Google Calendar, Asana, Notion, and thousands more. No code. No glue.

WHY IT'S TRENDING

I've used Zapier across multiple businesses for over 10 years. They've been doing automation reliably long before this moment — and the MCP service brings that same reliability to any AI agent you're building with.

Try Zapier MCP →

TOOLS

8,000+

SETUP

2 min

PLAN

Free start

HIGHLIGHTS

• Zapier just released MCP

Exposes 8,000+ tools as MCP resources any agent can call.

• Works with every agent

Claude Code, OpenCode, Cursor — anything that speaks MCP.

• Setup in two minutes

Enable the tools you want in Zapier, grab the MCP endpoint, paste it into your agent.

• Zero code, zero glue

Zapier handles auth, rate limits, and reliability for you.

• Battle-tested infra

Built on 10+ years of automation pipes, with an MCP face.

HEARD ON X · SELF-HOSTED AI

PewDiePie built a free ChatGPT alternative that runs on your own computer.

WHY IT'S TRENDING

He announced it May 31 with a video at 2.4 million views in five days — and the repo hit ~47,000 stars just as fast. Pure anti-Big-Tech pitch: ChatGPT Plus is \$20/mo, Claude Pro \$17/mo — this is \$0 on your own hardware, and your data never leaves the machine.

LAUNCHED
May 31

HIGHLIGHTS

- Chat with any model
Local via Ollama or llama.cpp, or API providers like OpenAI and OpenRouter.
- Agents with tools
Web, files, shell, memory, and skills — built on opencode.
- Cookbook
Scans your hardware and recommends AI models that actually fit your machine.
- Email with AI triage
Urgency flags, auto-tagging, auto-summaries, and draft replies for your inbox.
- Written mostly by AI
The acknowledgments file credits the AI models that wrote most of the code.

HEARD ON X · AGENT MEMORY

Y Combinator's CEO built a permanent memory for his AI agents — then gave it away.

WHY IT'S TRENDING

The README opens: "I'm Garry Tan, President and CEO of Y Combinator. I built GBrain to run my own AI agents." His own deployment holds 146,646 pages and 24,585 people. A recent release added a voice agent built on Gemini Live, and YC is running a hackathon around it and its ~95k-star sibling, gstack.

BRAIN PAGES
146k

HIGHLIGHTS

- Answers, not search results
Returns a synthesized, cited answer plus a list of what the brain doesn't know.
- Self-wiring knowledge graph
Every saved page creates typed connections — works_at, invested_in, founded — automatically.
- Dream cycle
Enriches itself around the clock: dedupes people, fixes citations, finds contradictions.
- Company brain mode
Multi-user team memory with per-person access scoping.
- Installed by your agent
Paste one instruction line into any AI agent and it sets GBrain up itself.

HEARD ON X · BROWSER AGENTS

Microsoft's bet: the best browser agent is a coding agent with a terminal.

WHY IT'S TRENDING

Instead of clicking a browser step by step, it has your AI write a rerunnable script that does the whole web task — book the flight, scrape the listings — and keeps the script so it never re-solves the same problem. Microsoft claims state-of-the-art results on long-horizon web-task benchmarks (their numbers), and it plugs into Claude Code, Codex, OpenClaw, and Hermes.

View repo →

STARS ~5.1k	BUILT BY Microsoft	CORE SIZE ~1.5k LoC
----------------	-----------------------	------------------------

HIGHLIGHTS

- **Code instead of clicks**
The agent writes a Python script for the whole task — rerunnable, adaptable, shareable.
- **Tiny by design**
The core agent loop is one ~450-line file; no hidden frameworks or orchestration.
- **Plugs into your agent**
`/plugin install webwright@webwright` in Claude Code; also Codex, OpenClaw, Hermes.
- **Benchmark claims**
86.7% on Online-Mind2Web and +15.6 points over prior best on long-horizon tasks — their own numbers.
- **Reusable tools**
One command turns a finished task into a parameterized tool you rerun with new values.

LINKS

X: Webwright

HEARD ON X · DOCUMENT PARSING

A fast, local PDF parser from the LlamaIndex team — no cloud, no API key, free.

WHY IT'S TRENDING

From [run-llama](#), the company behind LlamaIndex. It pulls text out of PDFs with **exact positions on the page** — plus built-in OCR for scans — and everything runs on your machine. Works from Python, Node, Rust, or even the browser. Honest catch: it's also the on-ramp to their paid cloud parser for the hard documents.

[View repo](#) →

STARS ~9.2k	LANGUAGE Rust	LICENSE Apache 2.0
----------------	------------------	-----------------------

HIGHLIGHTS

- **Local and fast**
Spatial text parsing with bounding boxes — it knows where every word sits on the page.
- **OCR built in**
Tesseract is bundled with zero setup; plug in EasyOCR or PaddleOCR for tougher scans.
- **Eats any format**
Word, PowerPoint, Excel, and images auto-convert to PDF before parsing.
- **Screenshots for agents**
Generates page images so AI agents can see charts and layouts text can't capture.
- **One CLI everywhere**
`lit parse document.pdf` — same command from npm, pip, or cargo.

LINKS

X: [liteparse](#) (founder post)

AI CODING WORKFLOW

Your AI never makes the same mistake twice — every project makes the next one easier.

WHY IT'S TRENDING

Built by Every, a media company — not a dev-tools shop — and it shows in how teachable the method is: 80% planning and review, 20% execution. Release #161 shipped May 28, and it recently expanded from Claude Code to nine AI coding tools including Cursor, Copilot, and Gemini CLI.

View repo →

STARS

LANGUAGE

TypeScript

RUNS IN

9 tools

HIGHLIGHTS

- The loop**
Five commands: brainstorm → plan → work → code-review → compound.
- The "compound" step**
Documents lessons learned so "the next agent does not have to learn the same lesson from scratch."
- Review by committee**
The code-review command spawns multiple AI reviewers in parallel before anything merges.
- 37 skills + 51 agents**
The full toolbox ships inside the plugin.
- Works in 9 tools**
Claude Code, Cursor, Codex, Copilot, Factory Droid, Qwen Code, OpenCode, Gemini CLI, Kiro.

AI WRITING

A checklist that hunts down every AI writing tell — five text files, zero code.

WHY IT'S TRENDING

The star-to-effort ratio of the year: 12 commits, no code, ~7,500 stars — riding the cultural backlash against "AI slop." Built by design leader Hardik Pandya, who shipped it with a live before/after demo on his site. Works in Claude Code, Claude Projects, or any AI's instructions.

View repo →

STARS
~7.5k

LANGUAGE
Markdown

COMMITTS
12

HIGHLIGHTS

Banned-phrase list

Throat-clearing openers, business jargon, emphasis crutches, meta-commentary.

Catches structures, not just words

"Not because X. Because Y.", self-answering questions, dramatic one-liners.

Scores your writing

Rates drafts on five dimensions; below 35/50 means revise.

Works anywhere

Claude Code skill, Claude Projects upload, Cursor rules, or any system prompt.

Live demo

The author's site shows slop-ridden text with every tell highlighted.

AI MEMORY

Every new chat is an employee with amnesia — this gives your AI a long-term memory.

WHY IT'S TRENDING

They claim the #1 spot on all three major AI-memory benchmarks (their own runs — worth saying out loud) and just shipped plugins for Claude Code and other agents. Founded by Dhruvya Shah; the pricing page shows teams like Cluely and Nissan on it.

PROFILE RECALL
~50ms

HIGHLIGHTS

- **Handles contradictions**
"I moved to SF" automatically supersedes "I live in NYC"; stale facts expire.
- **A profile of you**
Auto-maintained and injected into any AI conversation in one fast call.
- **Connects your life**
Auto-syncs Google Drive, Gmail, Notion, OneDrive, and GitHub.
- **One install for all your tools**
The MCP server gives Claude Desktop, Cursor, and VS Code the same memory.
- **Drop-in for builders**
Wrappers for Vercel AI SDK, LangChain, OpenAI Agents SDK, and n8n.

All 10 repos, with sources, quotes, and the cross-cutting themes.

AGENT OPERATING SYSTEM

One builder's 10 months of AI-coding lessons, packaged into 63 agents and 249 skills — free.

WHY IT'S TRENDING

Version 2.0 is rolling out now (April's release candidate added a desktop dashboard), and maintainer **Affaan Mustafa** ships weekly. It's also genuinely divisive — fans call it the missing manual, critics call it over-engineering and token-burning. Both camps keep it trending at ~205,000 stars.

View repo →

STARS	AGENTS	SKILLS
~205k	63	249

HIGHLIGHTS

- 63 agents + 249 skills
Code review, security scanning, debugging — even investor-outreach writing.
- Works across 7+ tools
Claude Code natively, plus Codex, Cursor, Gemini CLI, Copilot, Zed, and more.
- It learns from you
Hooks watch your sessions and turn your patterns into reusable "instincts."
- Built-in security scanner
One command runs over 1,200 security tests on your code.
- Real receipts
A solo dev on Hacker News shipped a 214,000-line app to both app stores using ECC's instincts.

LINKS

- Full walkthroughyoutube.com

DESIGN TASTE

Teach your coding AI **good design taste**, so what it ships stops looking AI-built.

WHY IT'S TRENDING

It went viral enough that crypto scammers launched fake tokens using its name — the README now opens with a disclaimer. A big rewrite of the main skill just landed (marked experimental), and at ~30,800 stars it's the default answer to "why do my AI frontends look generic?"

View repo →

STARS ~30.8k	LANGUAGE Markdown	SKILLS 12
-----------------	----------------------	--------------

HIGHLIGHTS

- 12 skills, not one
Variants for minimalist, brutalist, soft UI, redesigns — plus a stricter version for Codex.
- Three dials
Set design variance, motion intensity, and visual density on a 1–10 scale.
- Designs from pictures
Companion skills generate reference images first, then build the frontend to match.
- Works with any framework
React, Vue, Svelte — the rules target design intent, not code style.
- One-line install
`npx skills add https://github.com/Leonxlnx/taste-skill`

CODEBASE INTELLIGENCE

A clickable map of any codebase — guided tours, plain-English search, blast-radius checks.

WHY IT'S TRENDING

Hit 5,000 stars in its first week (per third-party coverage) and shipped a big dashboard overhaul in May. There's a **live demo** anyone can click around. Worth knowing: a Hacker News thread questions whether some of its stars are organic — a fair flag for a repo this young moving this fast.

View repo →

STARS

OPEN-SOURCE VOICE

Describe a voice in plain English and it reads your script in **studio quality** — 30 languages, free.

WHY IT'S TRENDING

The new model dropped in April and shot to **#1** on GitHub Trending — trained on over **2 million hours of speech**. From OpenBMB with Tsinghua University's speech lab, and their published benchmark shows it beating ElevenLabs (\$22–\$990/mo) on voice similarity in 22 of 24 languages — their numbers, but published openly.

View repo →

Python

SPEAKS
30 langs

HIGHLIGHTS

- Voice design from text**
No recording needed — describe the voice and it exists.
- Cloning from a short clip**
And you can still steer emotion, pace, and style afterward.
- Studio-grade output**
48kHz audio with built-in upscaling, faster than real time on a good GPU.
- Make it yours**
Fine-tune to a specific speaker with as little as 5–10 minutes of audio.
- Try it now**
Free live playground on Hugging Face — no install.
